

Next.js Landing Page Modernization

For Native Roofing Enterprises, Inc.

This proposal documents the modernization of the Native Roofing Enterprises website (<https://nativeroofing.com>) into a high-performance, fully responsive, and animated bilingual landing page built with Next.js, Bootstrap 5.3, and Framer Motion. The new layout is tailored for high conversions and satisfies modern SEO, AEO, and GEO international standards.

1. Identified Gaps in Current Landing Page

- **Performance Overhead:** WordPress & Elementor overhead loaded dozens of legacy stylesheets/scripts (jQuery, Slick, etc.), causing poor Core Web Vitals (LCP, INP) and dragging down rankings.
- **Third-Party Iframes:** The quote form (LeadConnector) and financing banner (Enhancify) were embedded in slow, non-responsive iframes, breaking visual cohesion and mobile UX.
- **Bilingual Gap:** Wellington and South Florida counties require bilingual outreach (English/Spanish). The previous site had dummy language flags that were non-functional.
- **No Visual Slider:** Lacked an interactive Before/After slider to demonstrate visual roofing restoration proof to potential customers.
- **SEO/AEO/GEO Gaps:** Missing descriptive metadata, voice-search structured answers (AEO), and unambiguous local business coordinates/license data (GEO) for AI engine citations.

2. Modernized Solution Architecture

- **Next.js 14+ (App Router):** Rebuilt as a React-based single-page app utilizing static page pre-generation. Yields near-instant page load speed and smooth transitions.
- **Bootstrap 5.3 & Sass:** Styled with utility variables matching the teal (#255f71) and slate (#0f172a) branding, loaded cleanly via SCSS to prevent styling bloat.
- **Framer Motion:** Powers smooth, responsive entrance transitions for content blocks and multi-step form sequences, elevating page premium aesthetics.
- **Bilingual Language Context:** Built a dedicated React Context translating all page content dynamically between English and Spanish via a simple header toggle.
- **5-Step Form Funnel:** A native form wizard directly in the Hero column 2. Captures service type, materials, urgency, property type, and details, posting directly to Formspree.
- **Before/After Slider:** Custom drag-enabled component allowing users to slide and compare visual storm damage against certified new roofing installations.
- **Simulated Calculator:** Provides an interactive slider cost calculator for roofing loans, pre-qualifying users via

direct Enhancify links.

- **SEO/AEO/GEO Structured Data:** Configured structured local Schema (local coordinates, office hours, and Florida Certified License CCC1329730) for AI engine discoverability.

3. Business & Licensing Information

Property / Detail	Value
Florida State License	CCC1329730 (Certified Roofing Contractor)
Office Location	3031 Fortune Way STE A-18, Wellington, FL 33414
Office Phone Numbers	(561) 469-7930 (954) 236-9986
Email Contact	solutions@nativeroofing.com
Working Hours	Mon - Sat: 7:00 AM - 7:00 PM Sunday: Closed
